Pipe Markers

THE SIGNS OF A SAFE INDUSTRY

Our pipe markers comply to all recommendations outlined in ANSI Standard A13.1-1966 that pertain to marker code, marker length, color of wording and size of wording.

Materials

Identify pipes throughout the building by peeling off the backing and applying pressure to the vinyl surface for a fixed seal. Designate the direction of flow in the pipe using **Directional Flow Arrow Tape** found on page 97.

Labeling Pipes

- Pipe markers should be placed near all valves or flanges, next to areas where pipes shift direction or go through walls and floors.
- All Pipe markers should be placed on the lower side of the pipe if workers need to look up to see pipe and on the upper side of pipe if workers need to look down or placed directly facing the worker if pipe is eye level.

Color Code for Markers

ANSI A13.1-1981 Standard "Scheme for the Identification of Piping Systems"

Yellow/Black Lettering
Materials Inherently Hazardous
Flammable, Toxic, Explosive
Chemically Active or Poisonous

Red/White Lettering
Fire Quenching Materials
Indicates Sprinkler Systems
and Fire Protection Equipment

Green/White Lettering
Inherently Low Hazard Material
Non-toxic, Non-poisonous, does
not produce fire or explosions

Blue/White Lettering
Inherently Low Hazard Gases
Identifies Gases with little or no
threat to Life or Property
